Tuning With Primers by Paul Box

We're often asked if primers will make any difference in loads, and in truth they not only can in pressure but also in accuracy.

Each brand of primer has a different priming mixture which will result in both a different temperature as well as duration of the flame. This can have an impact on the burning of the powder due to the different coatings used by the powder manufacturers. Simply by switching to another brand of primer, the very best in a rifles accuracy level might be found.

If the reloader is already at a max load, it's always better to reduce the load by 1.5 grains first when switching to another primer, then start increasing the load again. Primers can be a great fine-tuning accuracy tool.

Duplicating Factory Load By Robert Treece

Sometimes we luck out and find a factory load that shoots real well in our firearms and the next thought is "I wonder what's in there, maybe I can make this myself." Whoa!! You can't make that load. Maybe something close, but not exactly the same. The reason; the powders being used by ammo manufacturers are often classified as "non-canister grade" powders and may not be the same as what you, the reloader, and Sierra use as

Sensitive to Recoil?? by Robert Treece

Do you have a new hunting partner who is sensitive to recoil? Handloading may help. Consider using a lighter bullet of proper construction or simply use a lighter powder charge with the heavier bullet (remaining within the suggested limits). One of these choices should help reduce recoil, therefore curtailing the "flinch" and increasing accuracy potential. So, whether this helps someone with a big magnum, a youngster, a light framed person, or even yourself, if it makes for a successful and humane hunt your goal is accomplished.

1998 New Product Announcements

.25 Caliber 100 grain HPBT MatchKing
Sierra has responded to the demands of loyal .25 caliber shooters with the introduction of our 100 grain HPBT MatchKing. This new bullet, stock number 1628 has it's roots in our .30 caliber 168 grain HPBT MatchKing, known around the world for it's unmatched accuracy. Designed with a length to allow magazine

referenced in reloading manuals. Reloading manuals do give recommendations that work well in many firearms. Stay within the suggested increments and enjoy safe shooting.

feeding, this bullet will prove to be a superb target bullet. No matter what your game, Sierra's newest MatchKing is up to the task.

Sierra's 4th Edition Rifle & Handgun Manuals on CD-Rom

All of the articles, photographs, loading data, charts, graphs and tables from Sierra's renowned Rifle and Handgun Reloading Manuals are now available for your PC. The computer version also includes audio and video clips and direct Internet access (local service required). Minimum system requirements include Microsoft Windows® 95, a 486(DX) or higher microprocessor, 8mb of RAM, a CD-Rom Drive (2x), audio board, 256-color or better display (640 x 480 VGA), headphones or speakers, mouse or compatible pointing device. Recommended access to the Internet to use Web links; Hayes compatible modem 28800 bps or higher. Also included in this program is the Burris Varminter shooting game.

This program is available from Sierra for \$39.95 and is scheduled for release in Late-December.

1997 Competitive Results

Below is a listing of major match winners in 1997 using Sierra Bullets. If you win a major match in 1998 using Sierra Bullets, and would like to be included in next years' listing, send your information to Adam Braverman.

National High Power Rifle Championship, Camp Perry, Ohio

MATCH WON	COMPETITOR
National Hi Power Rifle Champion	G. David Tubb
National Trophy Individual Match	SSG Kevin B. McMahon
Scott Trophy Match	Paul R. Case
Coast Artillery Match	G. David Tubb
Vandenberg Trophy Match	G. David Tubb
Army Cup Match	Raymond Gross
Appreciation Cup Match	SGT Lewis A. Tippie
